

VPN Instructions

Installing the Cisco VPN Client

If you do not have the Cisco AnyConnect VPN Client installed on your computer, follow the below instructions. Otherwise skip this step and proceed to "Using the Cisco VPN Client"

- Open a web browser and go to <https://vpn1.gtri.gatech.edu>
 - Alternative server address: <https://vpn2.gtri.gatech.edu>
- Enter your GTRI Username and Password
 - Group: Select your current lab
- Complete the DUO prompt by your preferred method (cell phone, desk phone, etc.)

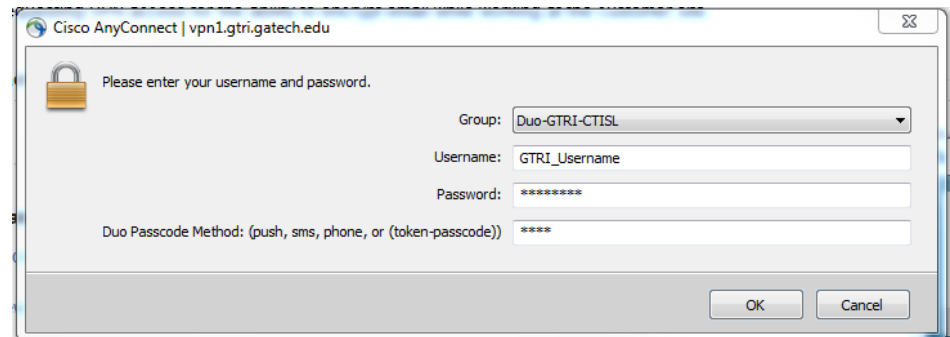

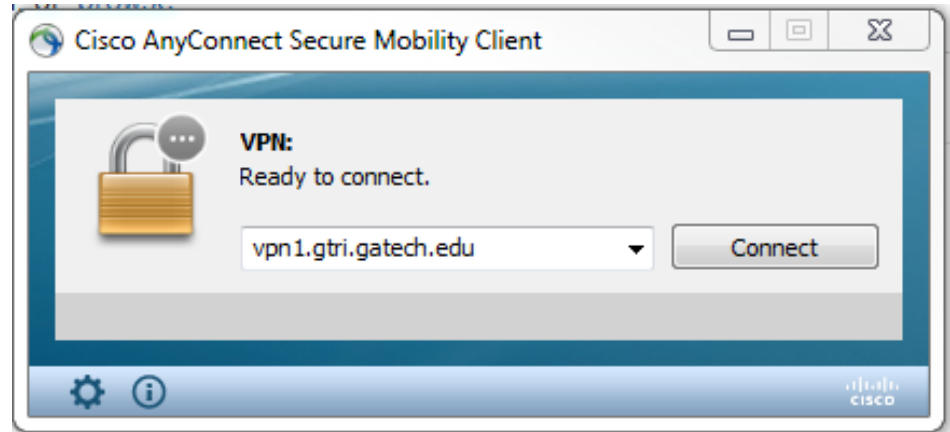

- Depending on the browser, a download will begin or a prompt will appear
 - Accept prompt to download AnyConnect VPN.
 - If no prompt, click "AnyConnect VPN" to download the client
 - If the installer doesn't launch automatically, locate the installer and start the process.

Using the Cisco VPN Client

- At this point your VPN client should now be installed on your machine. Open your Cisco VPN Client Software:

- Software can be difficult to locate on Mac environments
 - Command + Space and type "Cisco" to find AnyConnect
- Verify "vpn1.gtri.gatech.edu" is in the text box and press the Connect button
 - Group: Select your lab
 - Username and Password: Enter your GTRI Credentials
 - Duo Passcode Method
 - Enter "Push" to send a duo push to your phone
 - Enter "phone" to receive the code via automated phone call, enter code into text box
